

# Gaze-based assistance for wayfinders in the real world

Martin Raubal

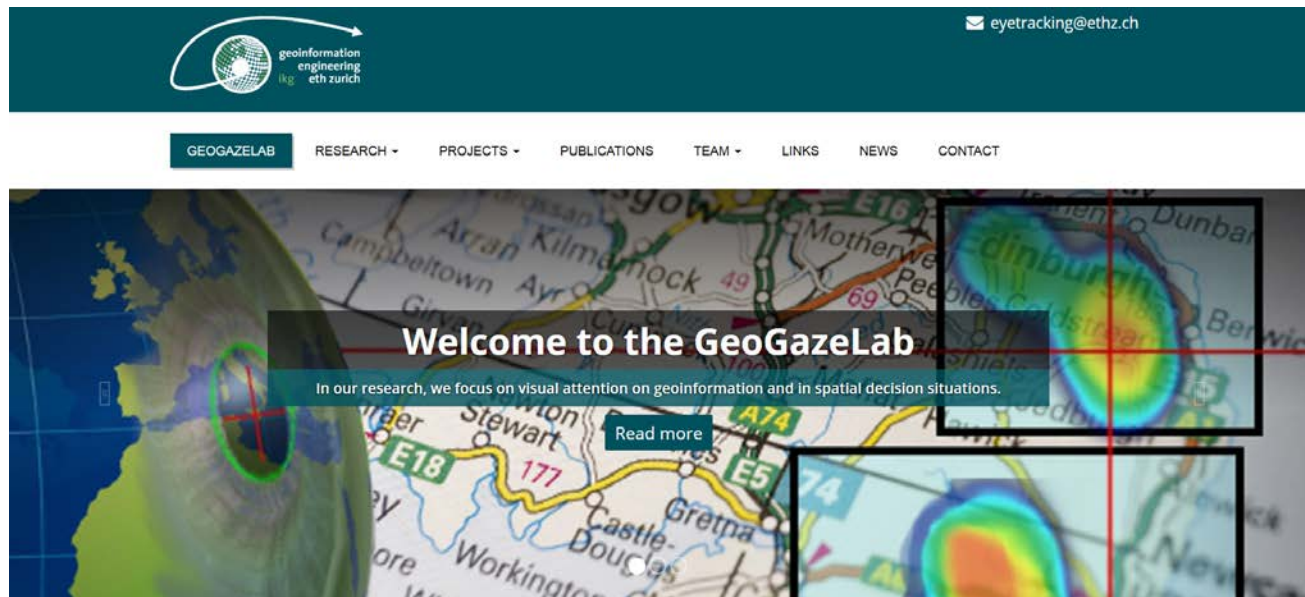

Institute of Cartography and Geoinformation

[mraubal@ethz.ch](mailto:mraubal@ethz.ch)

[INNOLEC Lecture, Masaryk University, Brno]

# GeoGazeLab

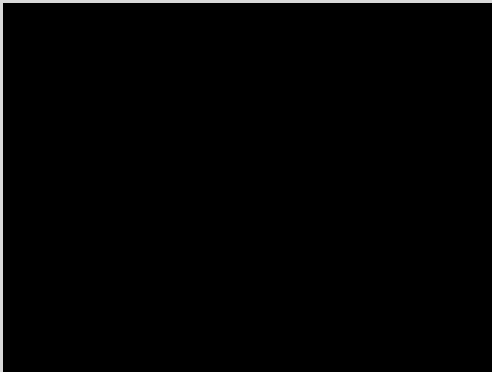

- Chair of Geoinformation Engineering
- Senior Scientist
- Post-doc
- 3 PhD students

- Ergoneers
- SMI
- Tobii
- SmartEye

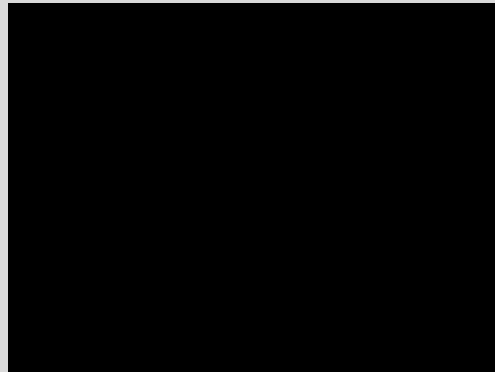

## Wayfinding

Cognitive processes  
and visual attention  
during pedestrian  
wayfinding

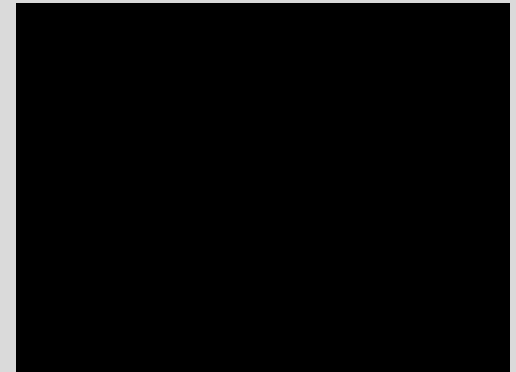

## GeoHCI

Gaze-based  
interaction with  
geographic  
information

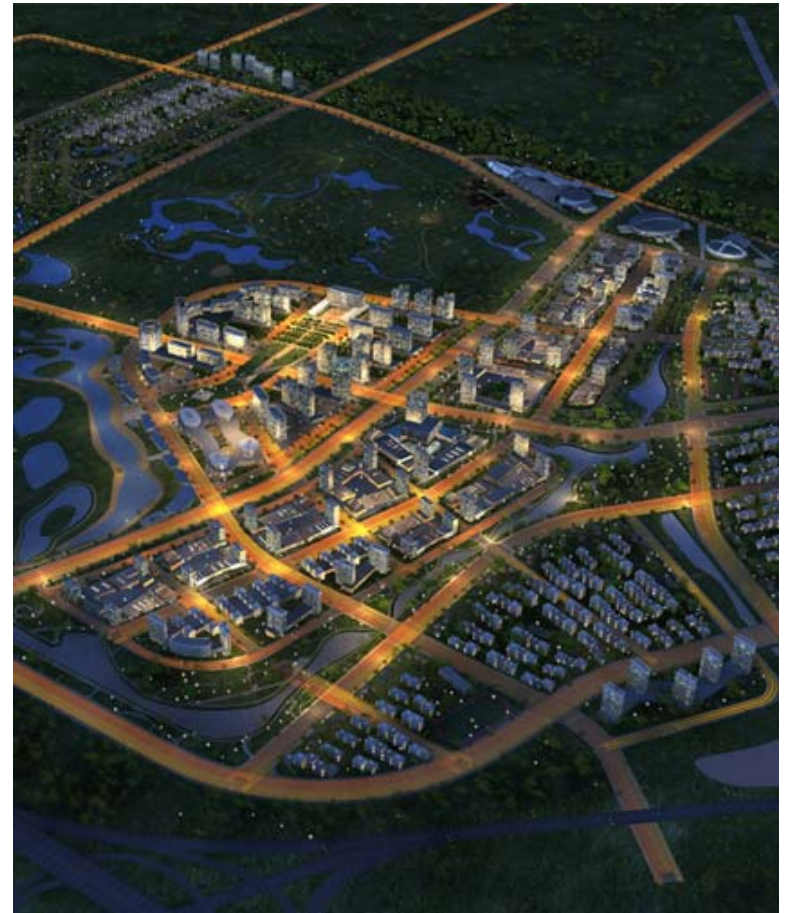

## Aviation Safety

Pilot's visual search  
strategies in the  
cockpit

# Overview

- Mobile decision-making
- Analyzing human wayfinding behavior
  - Location-aware mobile eye-tracking
  - Processes in wayfinding
- Mobile gaze-based decision support
  - Map interaction
  - Environmental interaction
- Conclusions

[www.woodsbagot.com](http://www.woodsbagot.com)

# Mobile decisions

# Mobile decision-making

- Spatio-temporal constraints relating to
  - people's behavior in large-scale space.
  - interaction with mobile devices.
  - perceptual, cognitive, and social processes.
- Ability to make quick decisions on the spot => fast access to spatial memory.
- Technological limitations of mobile devices, e.g., small screen size => challenge of presenting information to someone on the move.

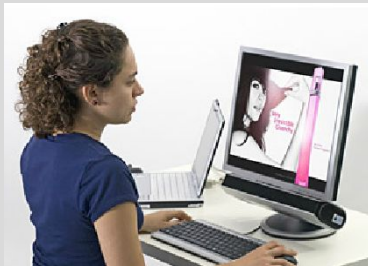

# Technology - Pros & Cons

- Services augment people's cognitive abilities
- Compensate for people's deficiencies
- Decreased spatial knowledge acquisition
- Negative impact on people's spatial learning of the environment
  - Insufficient processing of perceived information
  - Lack of attention to the environment
- Differences in mobile devices & presentation

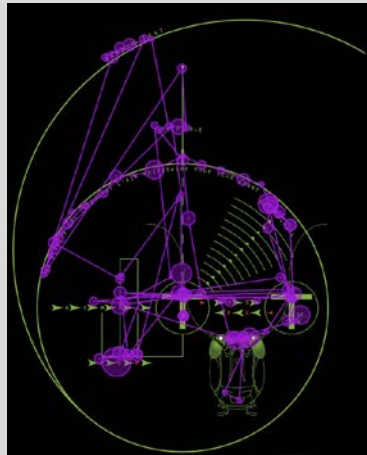

# Analyzing human wayfinding behavior

# Eye Tracking

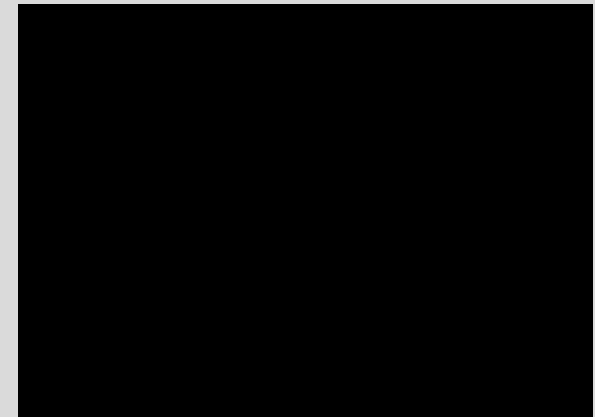

- Measuring visual attention
- Application domains
  - Psychology, consumer research, economy, architecture, arts, design, pilot safety training, ...

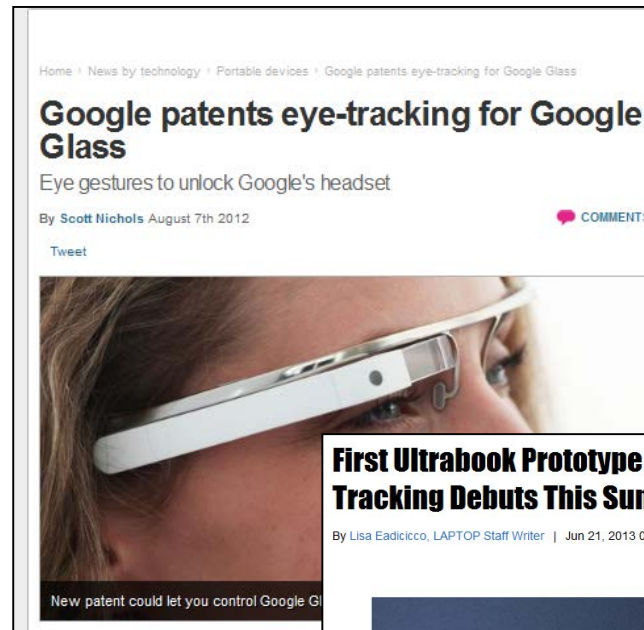

“Remote”  
Eye Tracking

Mobile  
Eye  
Tracking

# Eye tracking on the mass market?

## First Ultrabook Prototype With Built-In Eye Tracking Debuts This Summer

By Lisa Eadicicco, LAPTOP Staff Writer | Jun 21, 2013 03:27 PM EDT

<http://www.blogcdn.com/www.engadget.com/media/2013/03/dsc07873-1363294641.jpg>  
<https://theeyetribe.com/products/>  
<http://www.techradar.com/news/portable-devices/google-patents-eye-tracking-for-google-glass-1091428>  
<http://blog.laptopmag.com/first-ultrabook-eye-tracking>

# Mobile Eye tracking

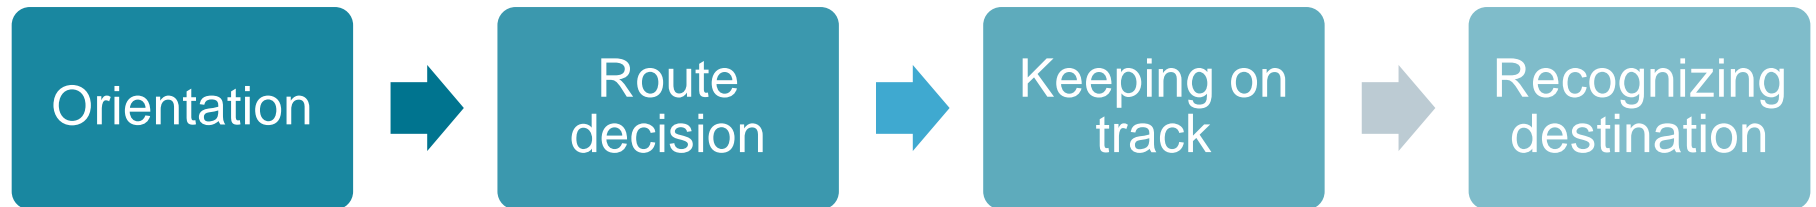

- Gaze recording: fixations & saccades
- Head-mounted device
  - Increased mobility
  - Realistic conditions
  - Sunlight & infrared?
- Gaze-overlay video
  - Frame coordinates
  - Visual markers define world-coordinate-system

# Cognitive Processes in Wayfinding

- Example (Downs&Stea, 1977)

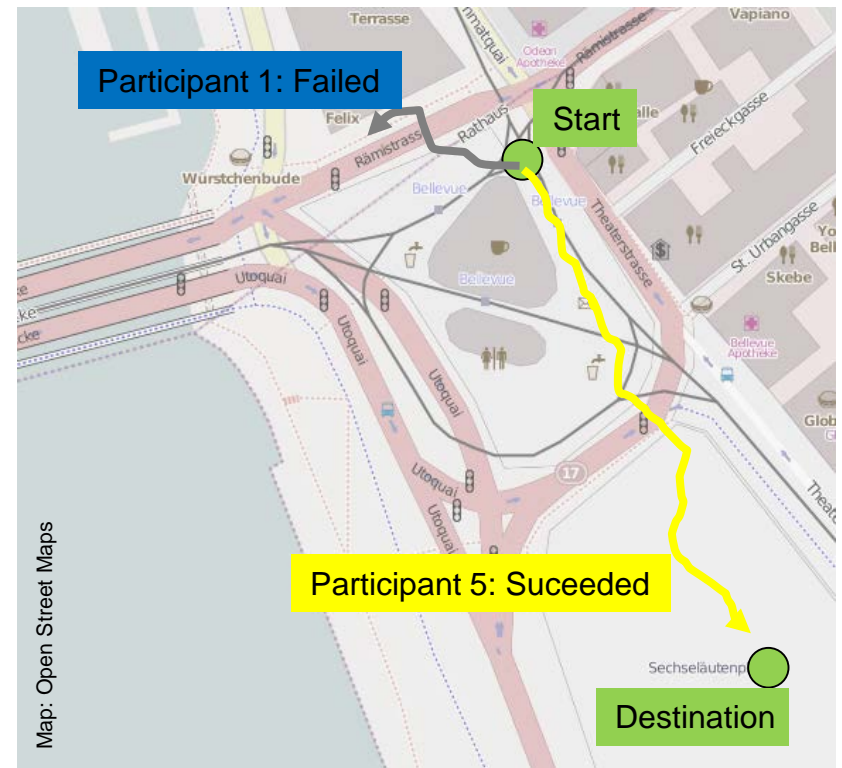

# Cognitive Engineering

- Goal
  - Intelligent user interfaces
  - Automated assistance based on user's cognitive states
- Empirical studies
  - Model of user activities and cognitive processes
- Engineering
  - Recognizer using the model
  - Adaptive system

# Human wayfinding behavior

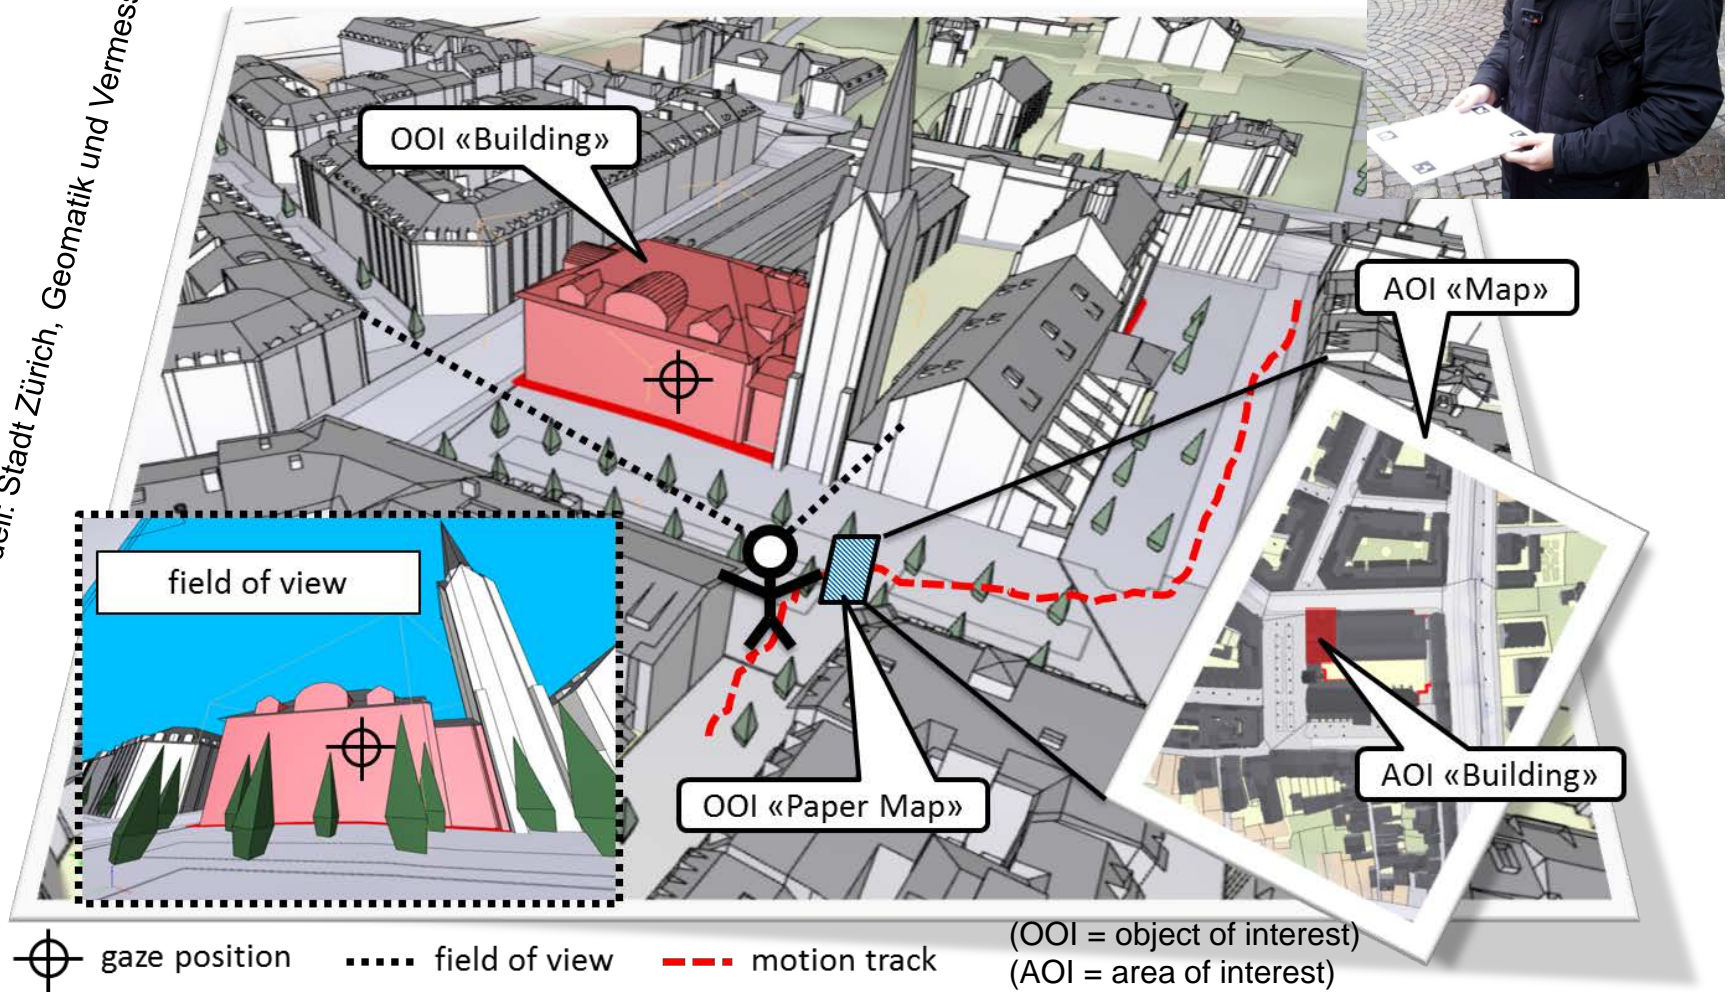

- **Where** and **why** do people get lost?
  - Ambiguity, complexity, instructions, map design, etc.
  - Typical approaches: questionnaires, interviews, behavior observation
- Can we get better answers to **the ‘why’ question?**

[Kiefer, Giannopoulos, Raubal; TGIS 2014]

# Location-aware mobile eye-tracking

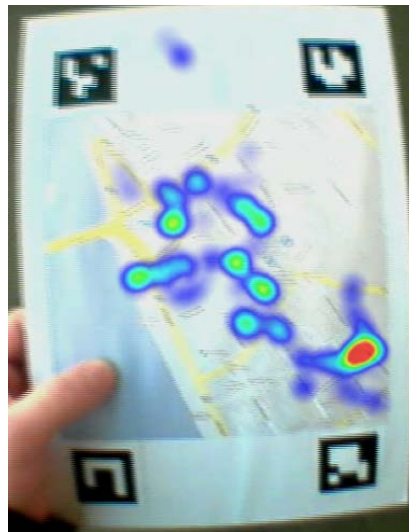

© 3D Stadtmodell: Stadt Zürich, Geomatik und Vermessung

# Self-localization

Participant 1:  
Success  
(heading South)

Participant 5:  
Failure  
(heading North)

Participant 1:  
Success

P4	M	N	W	M	S	M	S
M	M			M		M	
N		N					
E							
S					S		S
W			W				

Participant 5:  
Failure  
(heading North)

P1	S	M	S	M	S	E	M	W	M	W	N	E	S	W	S	W	S	N	S	E	N	S	W	N
M		M		M			M		M															
N											N							N			N			N
E						E						E								E				
S	S	S	S										S	S	S	S	S	S	S		S		S	
W								W	W					W	W								W	

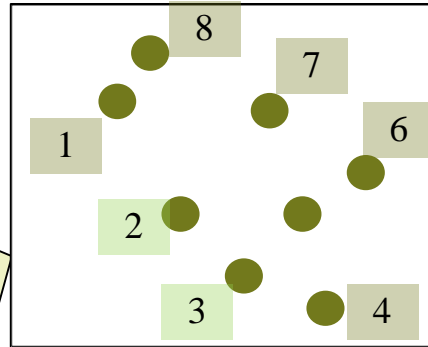

Sequence analysis for cardinal directions  
(N, E, S, W) and map (M)

## Hypothesis:

The process of self-localization can be observed from the gaze behavior *on the map / in the environment*.

# Landmark Identification

«Our next destination is the Opera. The prominent building is located at the Southern edge of 'Sechseläutenwiese' where the 'Seefeld' quarter starts.»

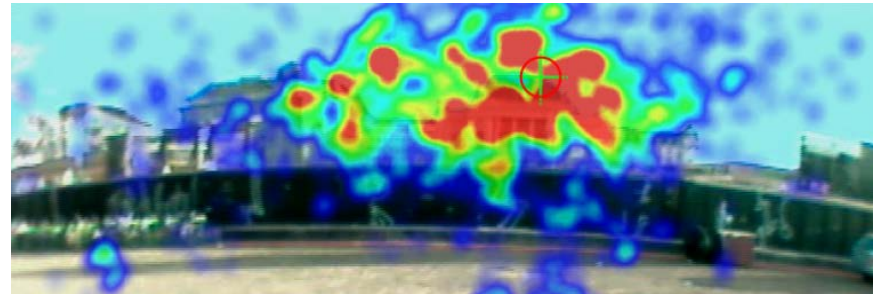

## Hypothesis:

The process of landmark identification can be observed from the gaze behavior in the environment.

*Other building*

*Opera*

Gaze distribution for landmarks

# Positions of Map Usage

«Our next destination is the old NZZ building at the intersection 'Theaterstrasse'/'Falkenstrasse'. The building is next to the Opera. The entrance is close to the tram station 'Opernhaus' and facing South towards the 'Seefeld' quarter.»

## Hypothesis:

Critical decision points can be determined from map usage (fixations on the map).

*Motion tracks of all participants,  
annotated with AOI 'map'  
(area of interest)  
Red: Fixation on map*

# A wayfinding study

- Self-Localization
  - «Please mark your position on this map»
  - Map symbols and corresponding landmarks
  - Some landmarks visible
  
- Requires visual search and logical inference
  - Eye tracking measures only search

[Kiefer, Giannopoulos, Raubal; TGIS 2014]

# Self-localization

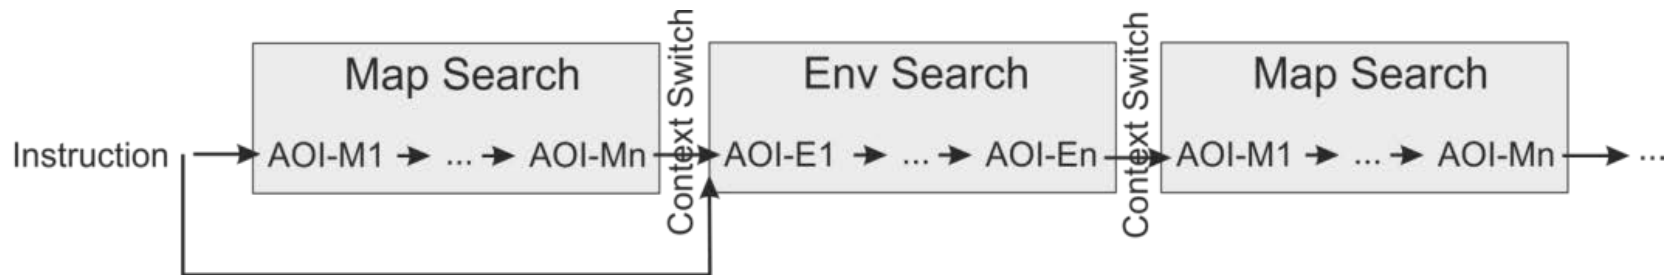

# Research Questions

## ■ RQ1

- Do successful participants spend more visual attention on map symbols that have a visible corresponding landmark than unsuccessful participants?
- (A distribution measure.)

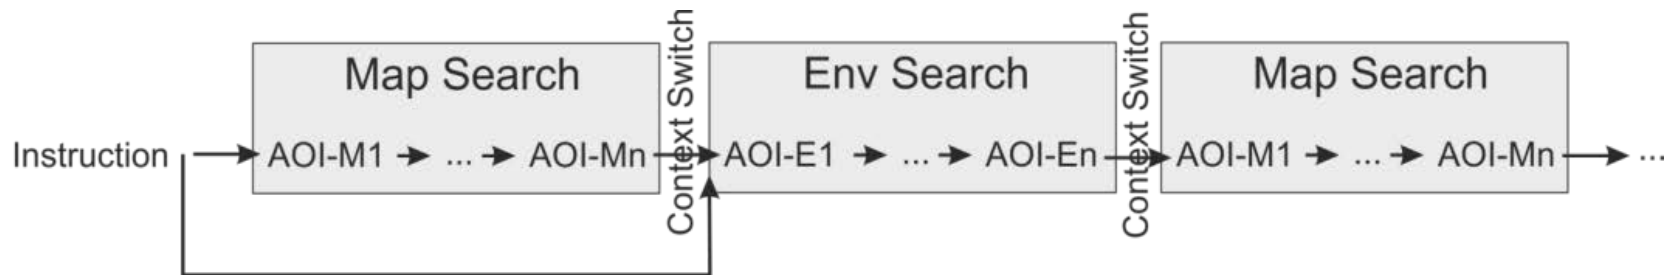

## ■ RQ2

- Do successful participants have more switches of visual attention between symbols on the map and their corresponding landmarks in the environment?
- (A sequence measure.)

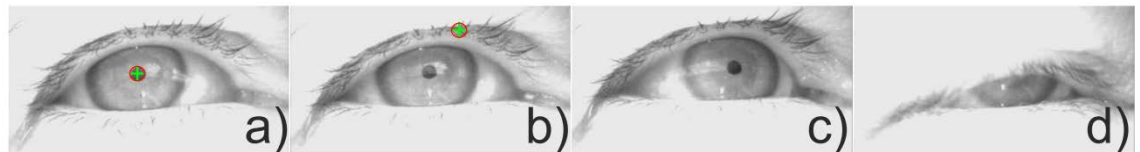

# Results

- Successful participants spent significantly more time fixating AOIs from the helpful AOIs category than the unsuccessful participants.
- Successful participants had significantly more switches of visual attention between symbols on the map and their corresponding landmarks in the environment than did unsuccessful participants.

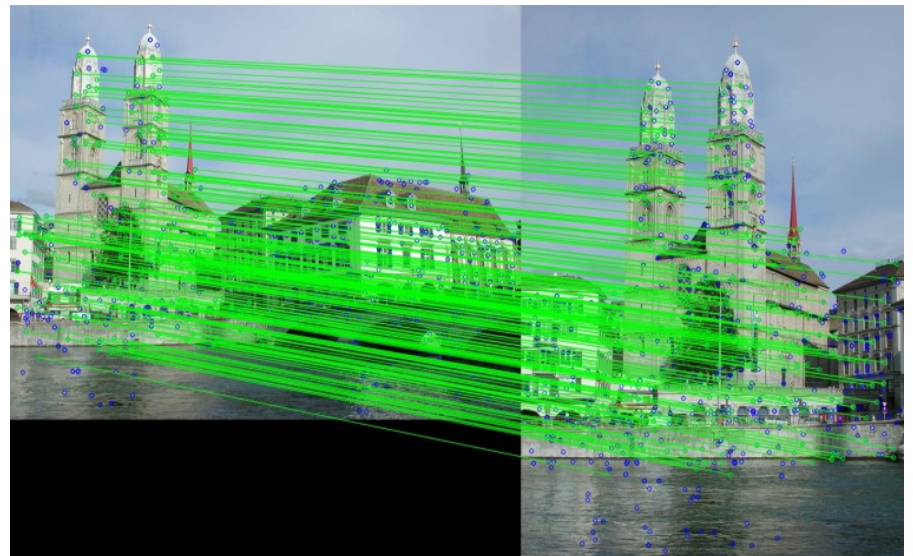

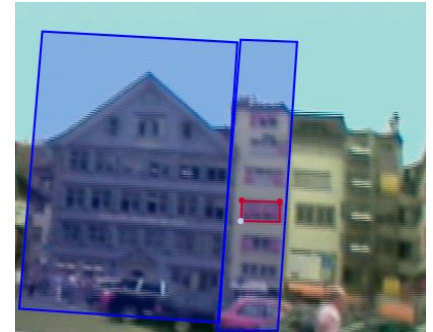

# Technological Challenges (1)

- Sunlight
  - ... interferes with infrared
- Dikablis
  - Saves two videos, manual post-processing frame-by-frame
  - Labor-intensive!
- SMI Glasses
  - Sunshades

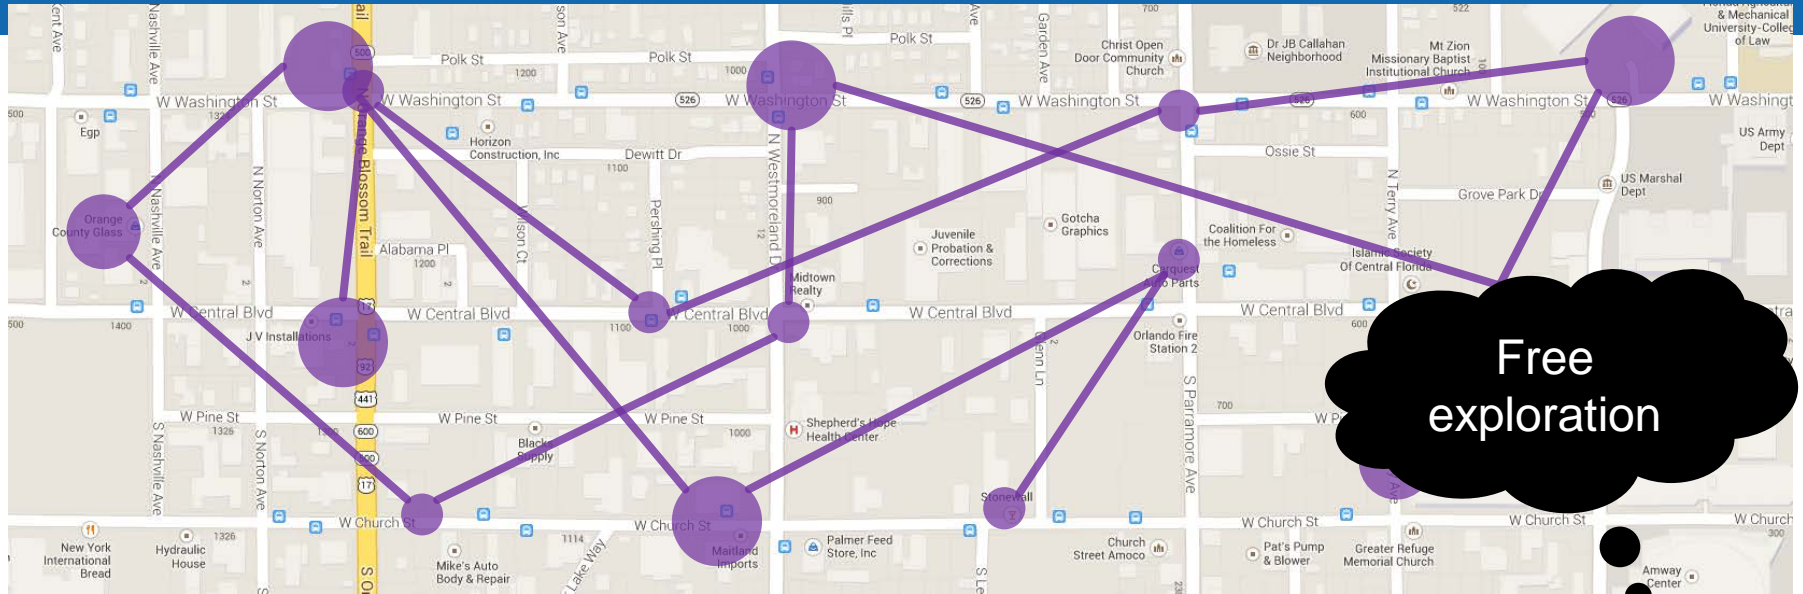

## Technological Challenges (2)

- Determining Object of Interest
  - Dikablis
    - Marker-based solution
    - Labor-intensive!
  - MSc theses
    - Pius Mosimann (2013)
      - Simple head-tracking helmet
      - 3D city model
    - Simon Haesler (2014)
      - Web service for the 3D intersection
    - Yufan Miao (2015)
      - Image-based localization

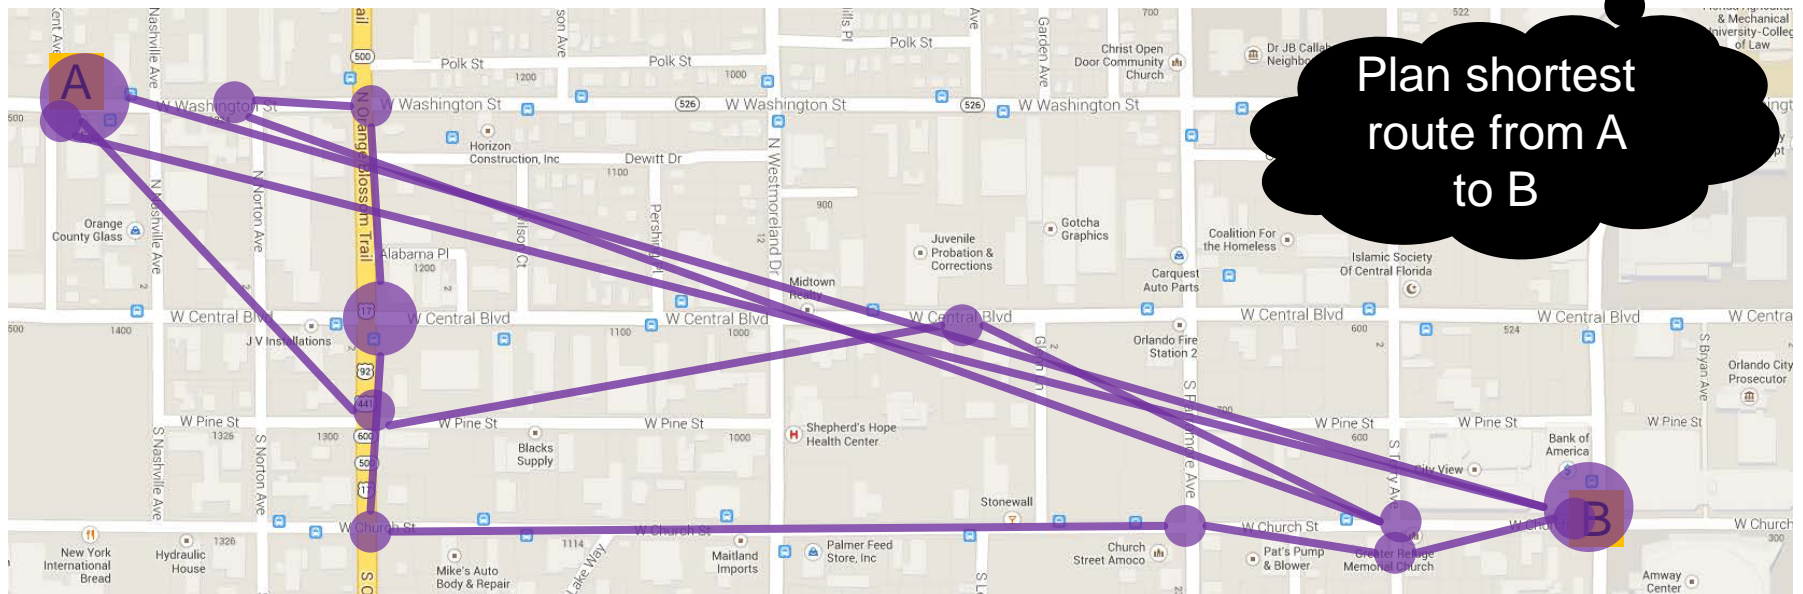

# A cognition-aware wayfinding assistant

[Kiefer, Giannopoulos, Raubal; ACM-GIS 2013]

# Mobile gaze-based decision support

# Gaze-Based Interaction

## Gaze as input modality

- Real-time gaze processing
- Intelligent assistance
- Midas touch problem

Eye typing (Majaranta et al., 2006)

## A) Explicit Interaction

«What you look at is what you get»

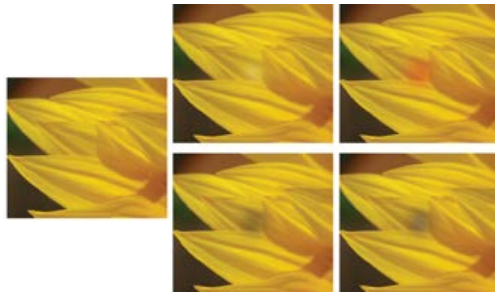

Zooming/panning (Stellmach, Dachse, 2012)

# Gaze-Based Interaction (2)

## B) Implicit Interaction

- Assistance in the background
- User does not intend to trigger an action

Subtle Gaze Direction (Bailey et al., 2009)

Predicted class							

Activity recognition (Bulling et al., 2011)

# Human Computer Interaction with eye tracking

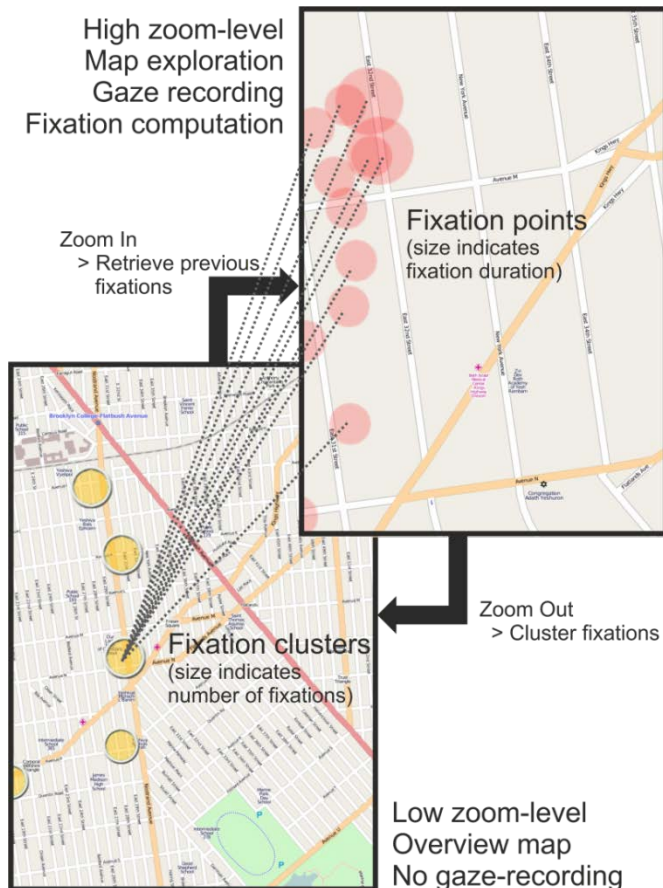

- Attentive Interfaces:  
content adapted  
dynamically based on  
gazes
- Examples:
  - Prediction of information  
needs (pre-caching)
  - Gazemarks as  
placeholders during  
context change

Example: Gazemarks

Kern, D. et al. (2010) Gazemarks: gaze-based visual placeholders to ease attention switching. In: Proc. of the 28th international conference on Human factors in computing systems (CHI'10), ACM, pp. 2093-2102

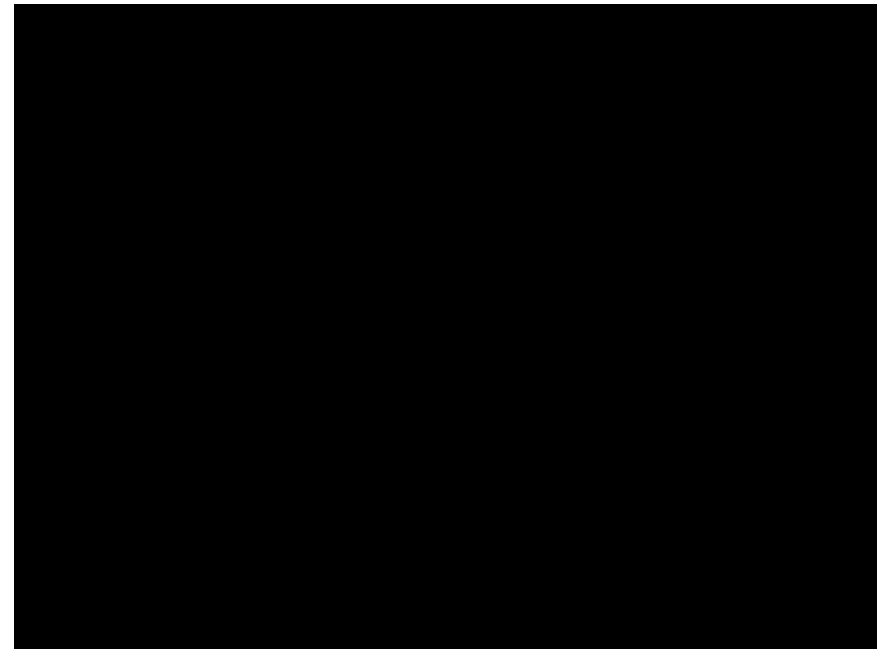

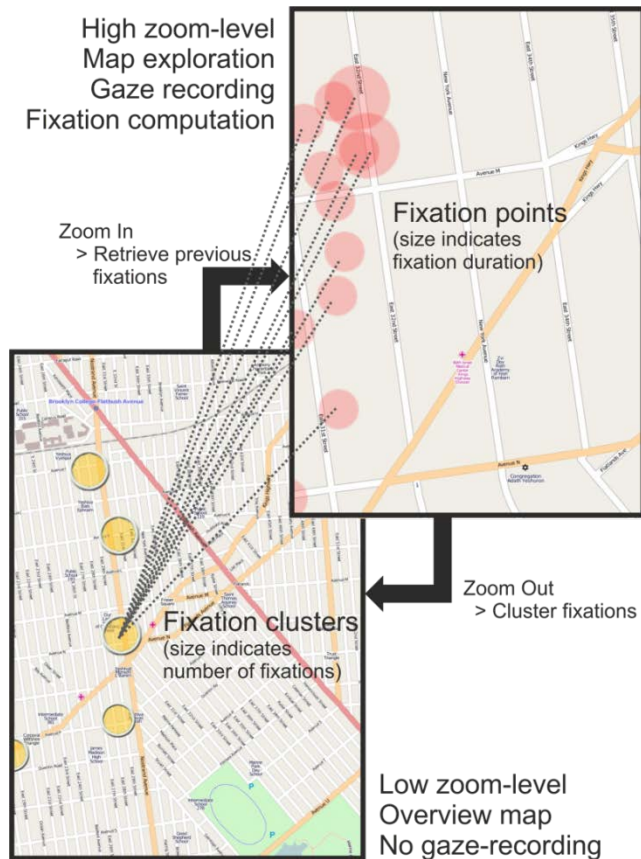

# GeoGazemarks

- Providing gaze history for the orientation on small display maps
- History of a user's visual attention on a map as visual clue to facilitate orientation.

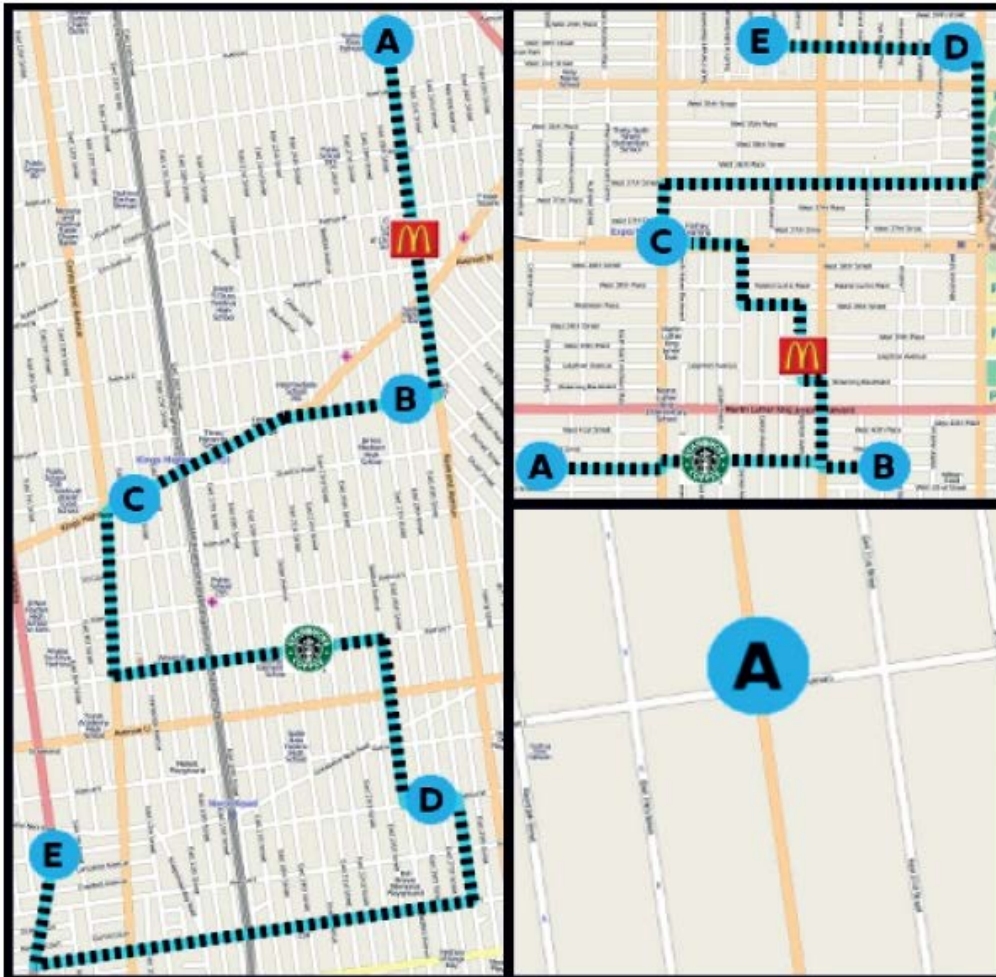

[Giannopoulos, Kiefer, Raubal; ICMI 2012]

# GeoGazemarks

[Giannopoulos, Kiefer, Raubal; ICMI 2012]

# Experiment

- 7 point objects on each map (5 blue circles, 2 logos)
- Participants traverse vector sequence (A->E) then find their way to logos.

## Results

Significant increase in efficiency and an increase in effectiveness for a map search task, compared to standard panning and zooming.

	Interaction Sequence Length	
	Median	Standard Deviation
Ggz	25.5	17.17
Std	75	52.6

Ggz = with GeoGazemarks, Std = without GeoGazemarks  
 $p < 0.001$ ,  $Z = -4.799$

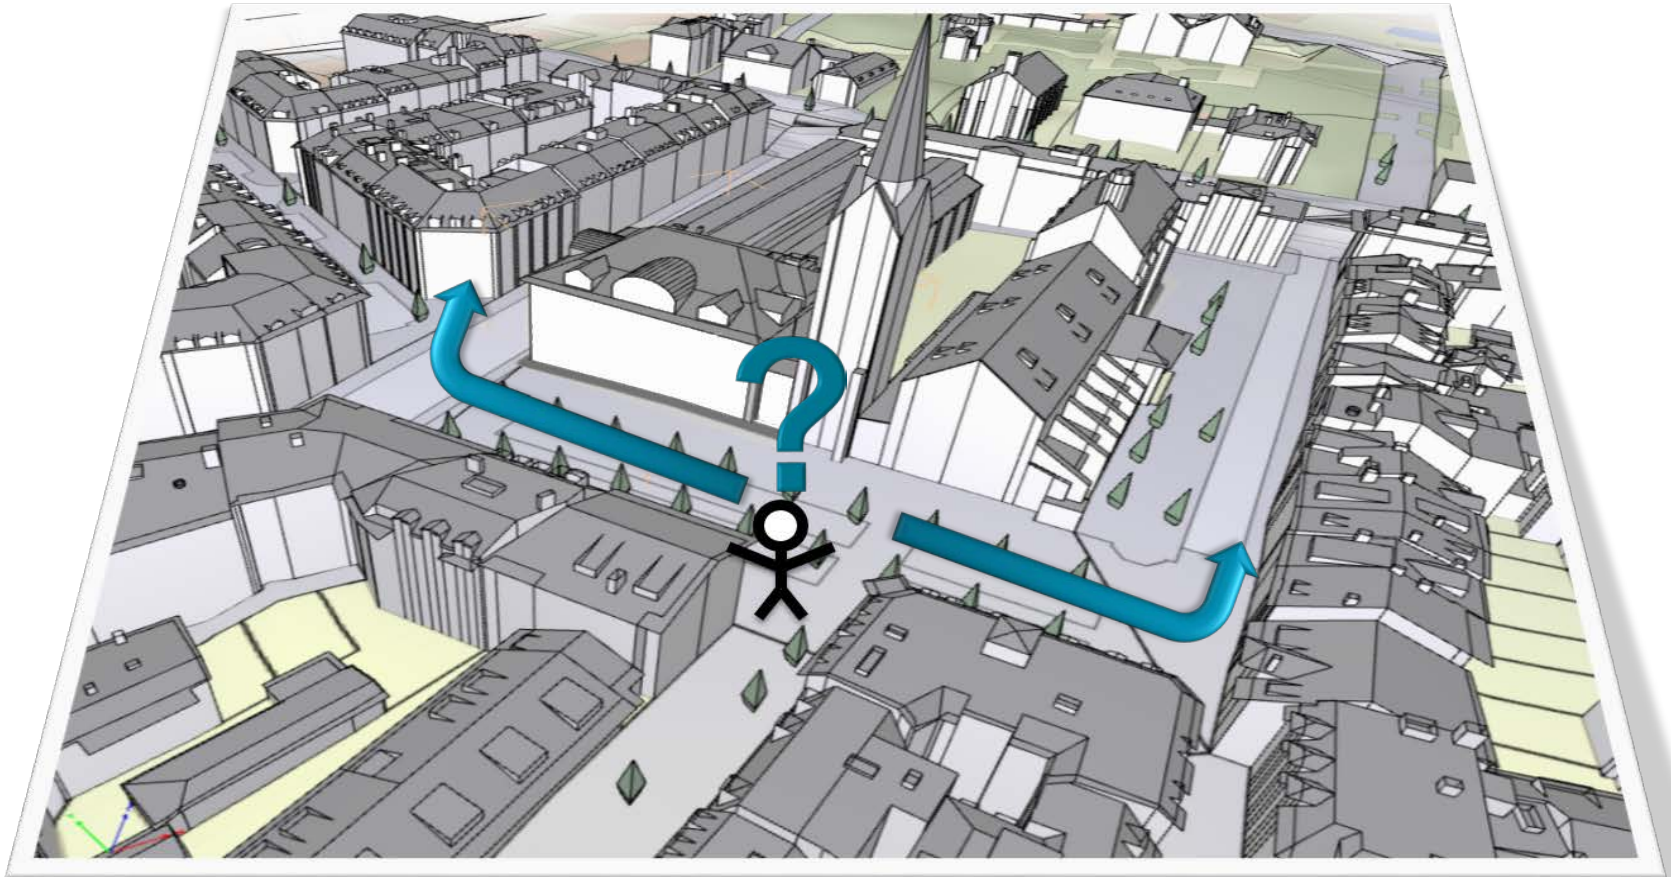

# Gaze-Based Pedestrian Navigation (GazeNav)

How can the user's gaze be utilized for navigation?

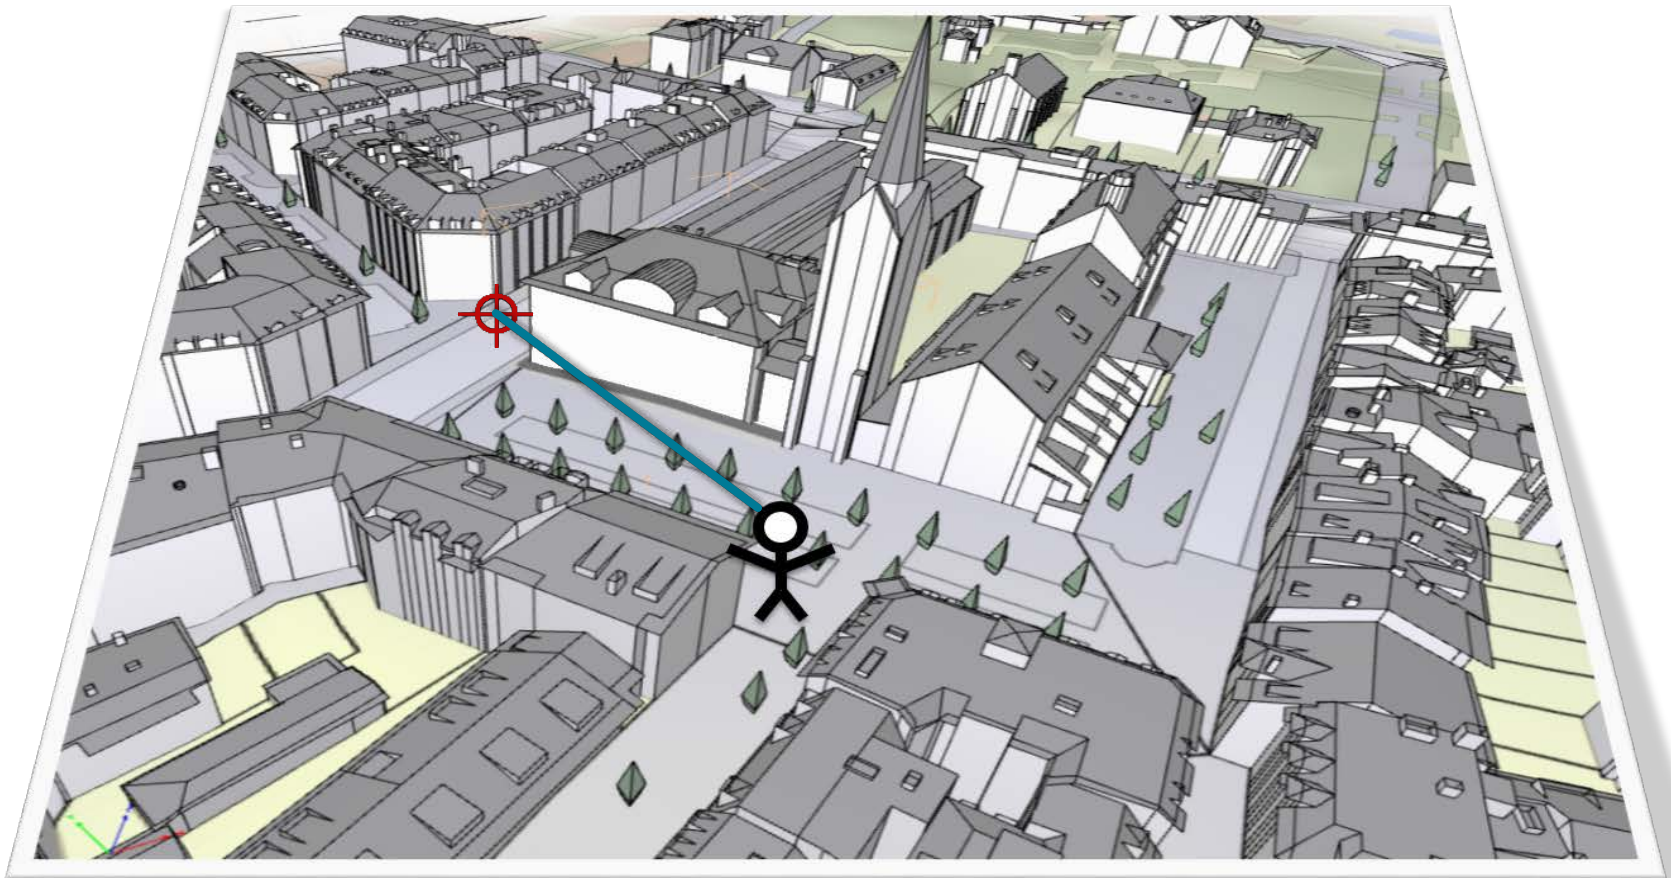

- Dissolve navigation ambiguities
- Hands-free interaction
- Improve local spatial learning
- Natural interaction with the environment
- Increase usability

# GazeNav

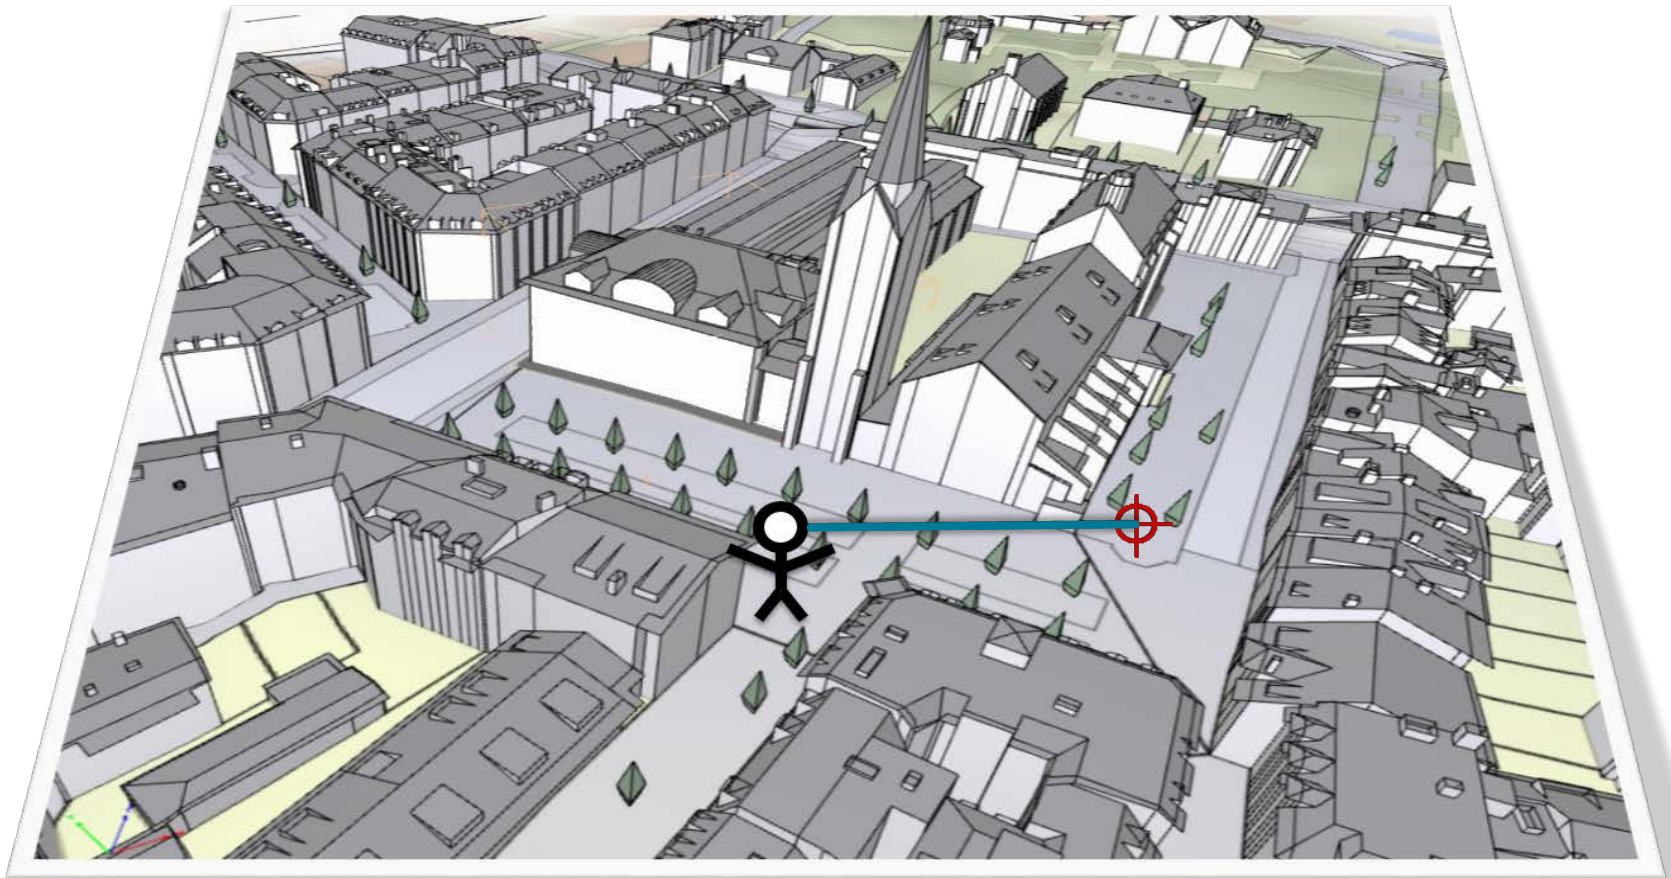

# GazeNav

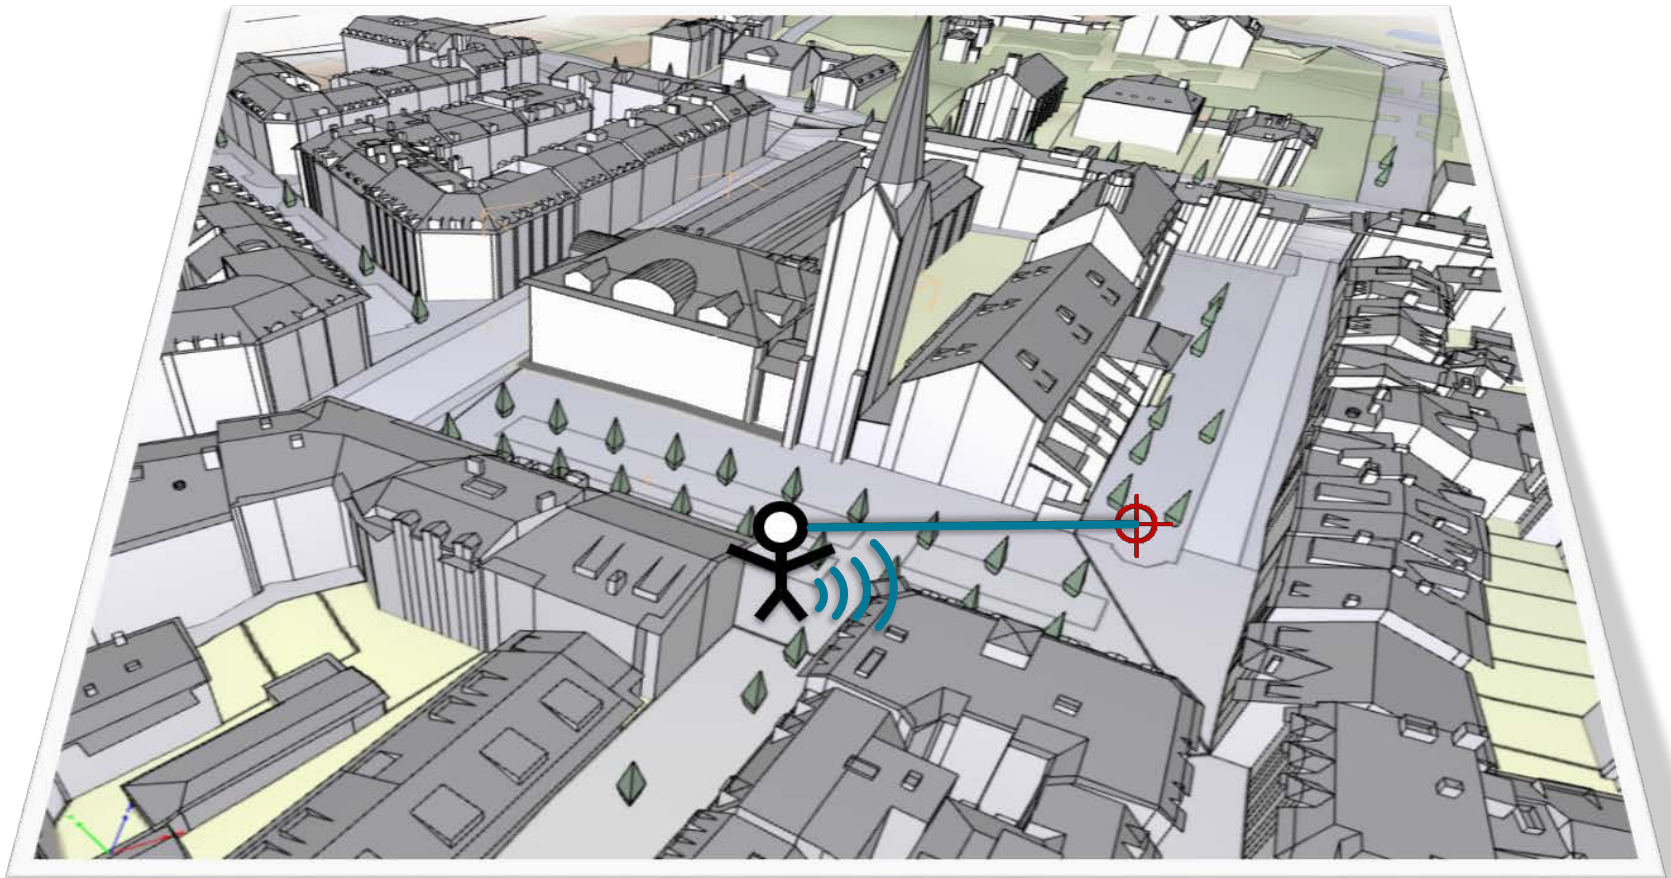

⊕ Gaze point

# GazeNav

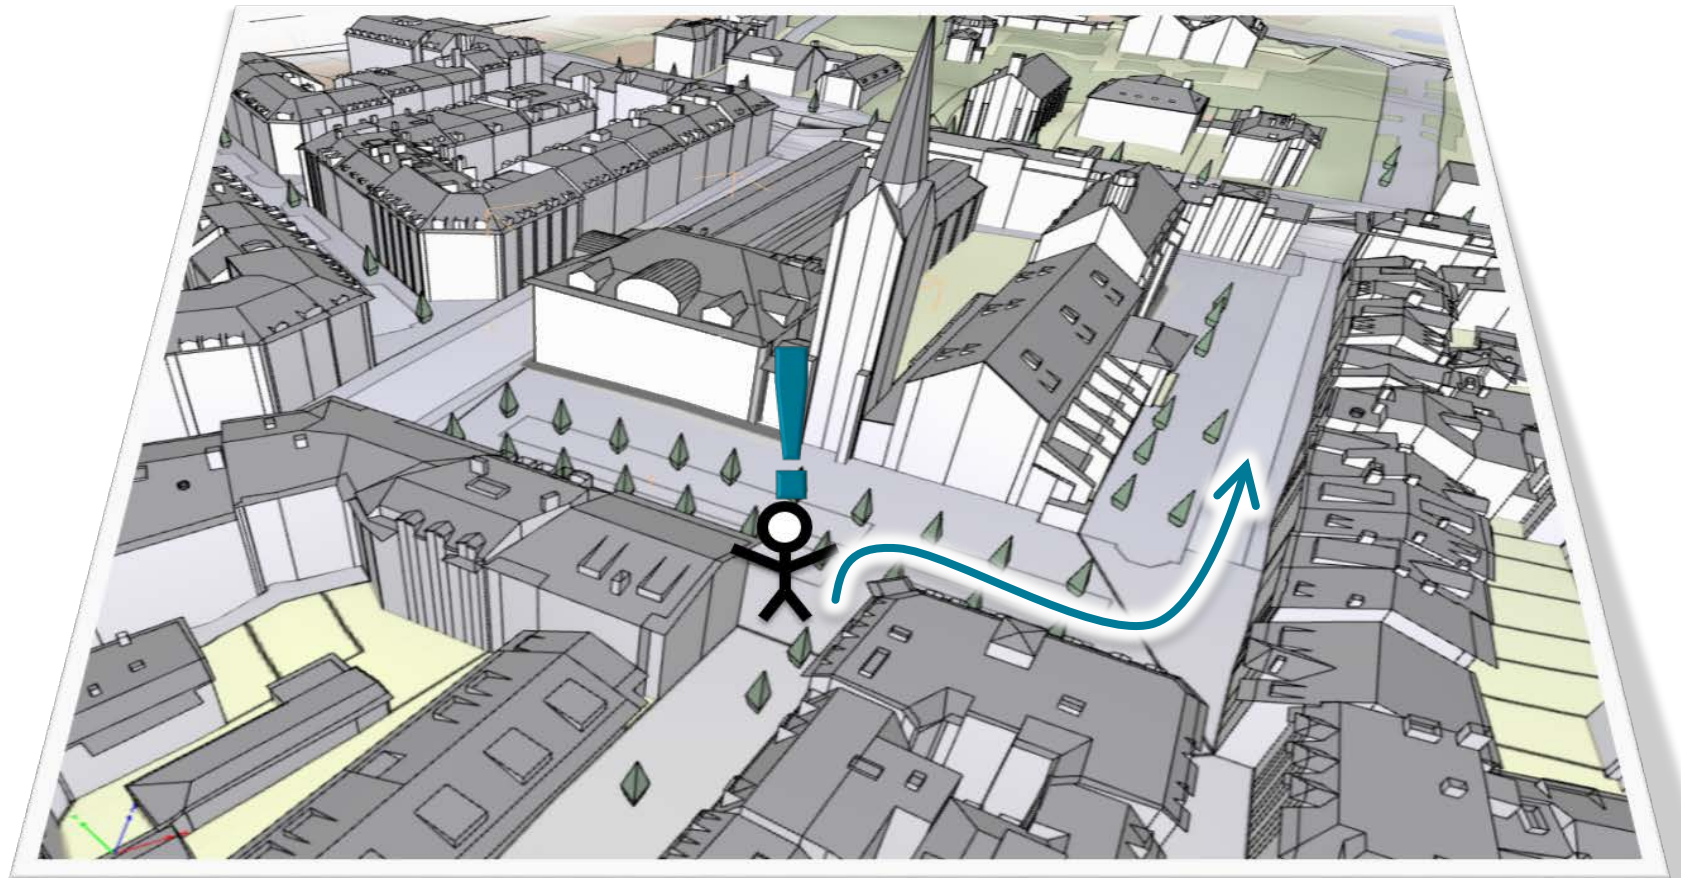

⊕ Gaze point

# GazeNav

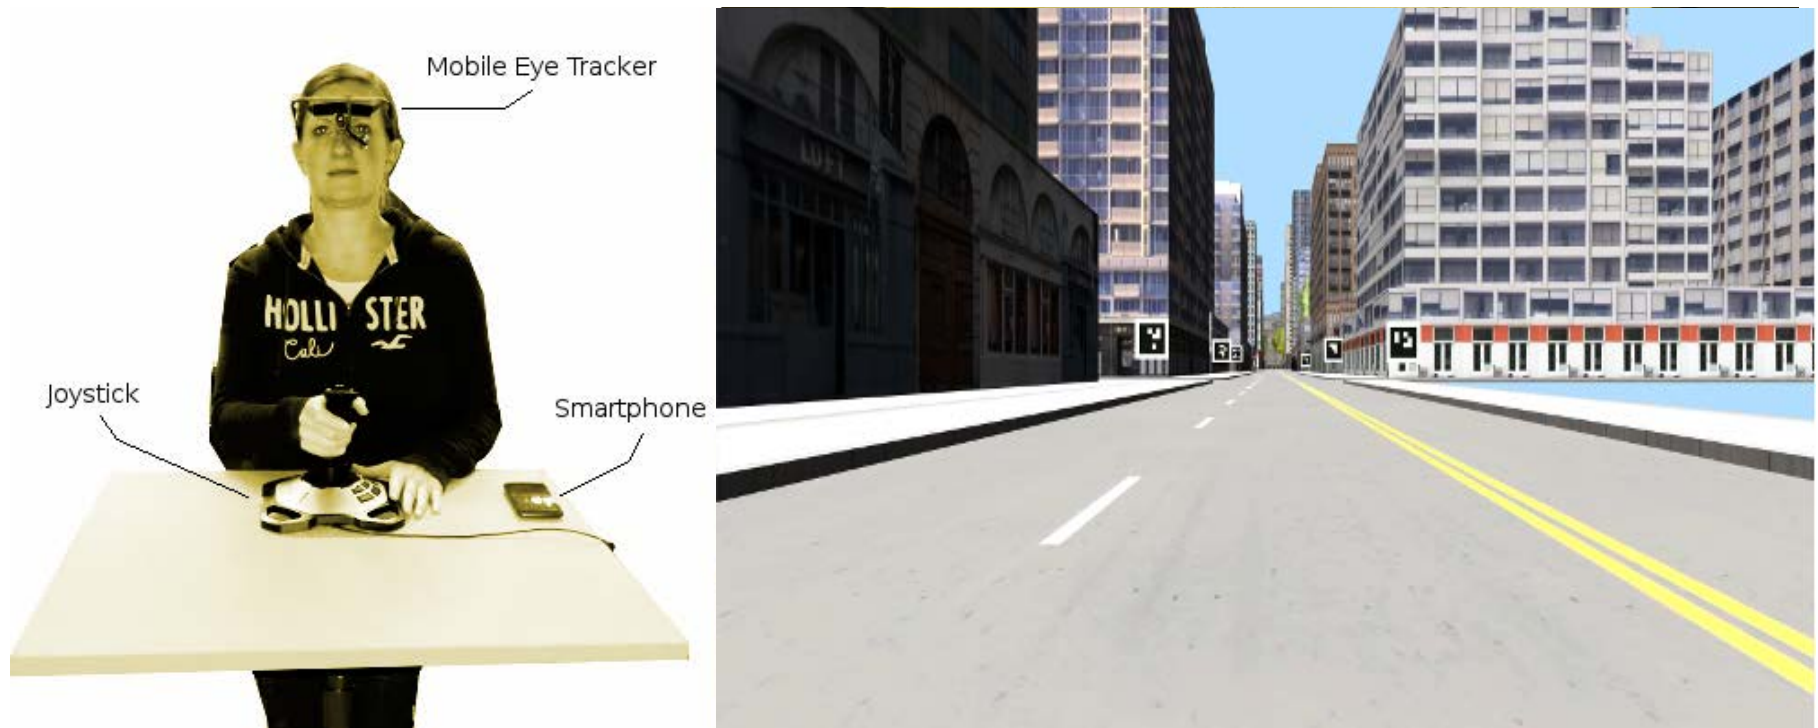

⊕ Gaze point

# GazeNav

# GazeNav: User Study in a Virtual Environment

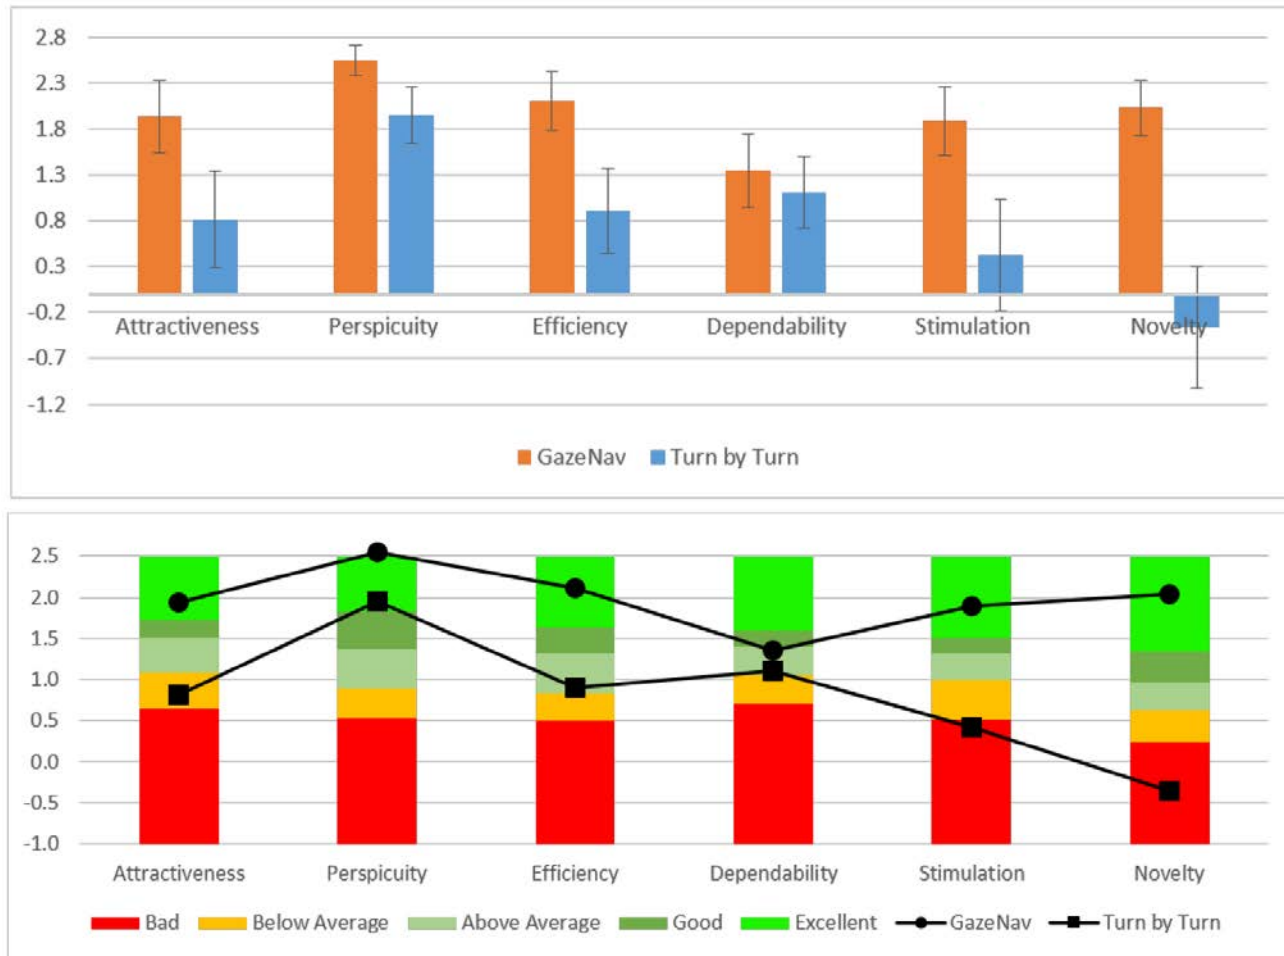

Between-group design; GazeNav vs. turn-by-turn;  
32 participants (13f), 16 per condition

# Hypotheses & Results

- H1: (Effectiveness)
  - Everyone completed the navigation task successfully.
- H2: (Efficiency)
  - No significant differences concerning the completion times.
- H3: (Spatial learning)
  - GazeNav participants correctly identified significantly more scenes.

## H4: (User Experience, UEQ)

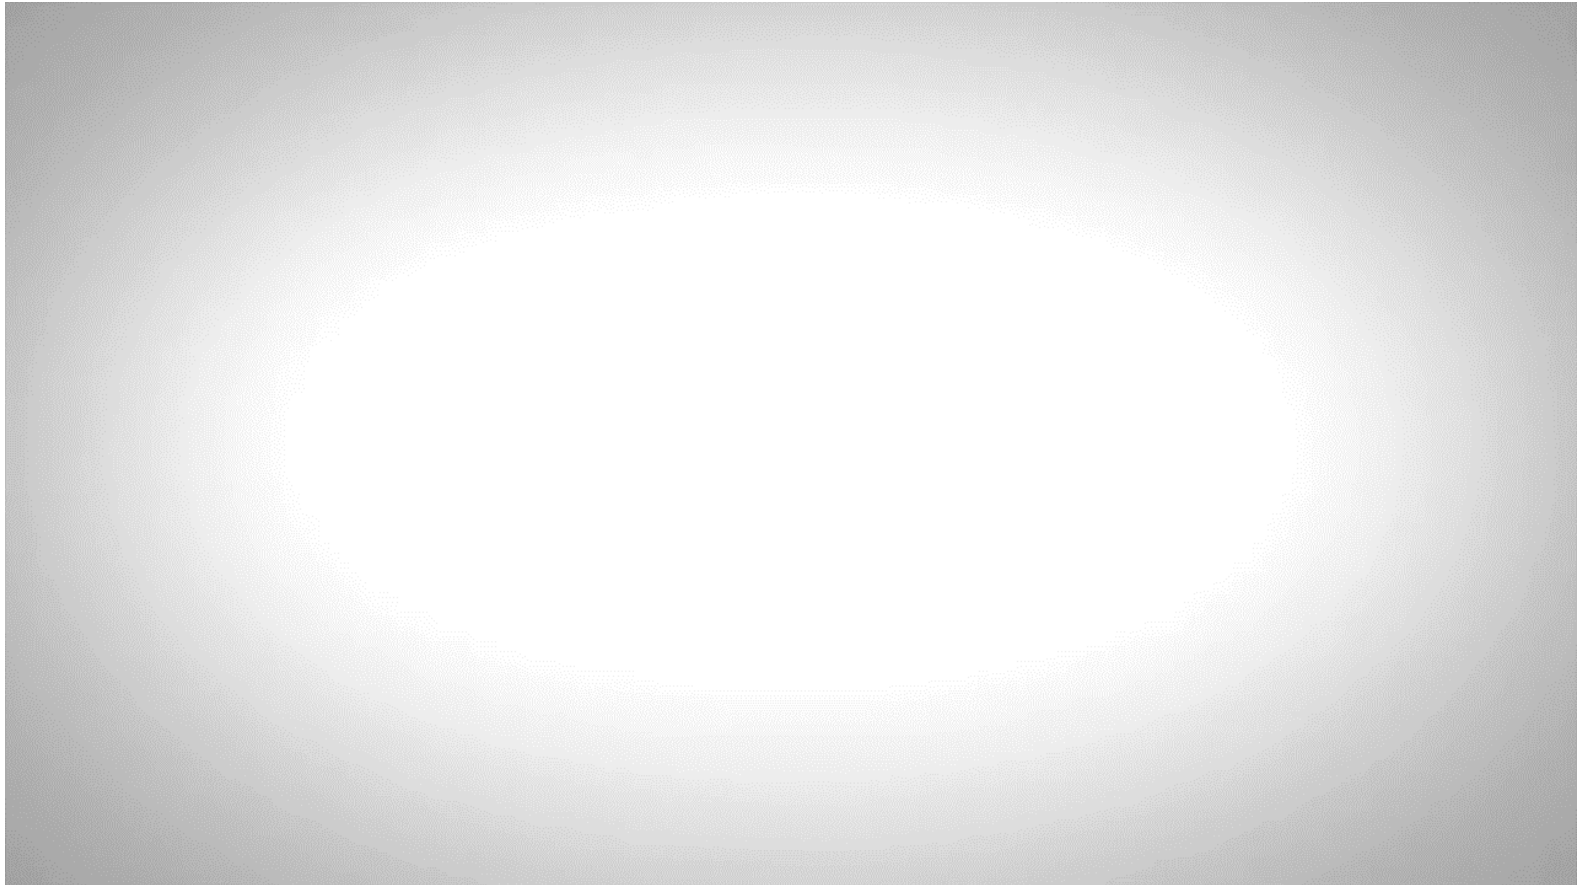

# Conclusions

- Mobility & mobile decision-making: Large challenges and opportunities
- Data, Methods, Technology for decision support
- Mobile eye-tracking offers novel ways to investigate individual behavior and provide support.
  - Analysis: Human wayfinding behavior
  - Interaction: Gaze-based decision support
- Watch out for new fields such as GeoHCI!
